COMPOSITE DECKING

Deck; They are environmentally friendly products obtained by combining 55% Wood Sawdust, 45% PVC and a certain amount of protective and binding materials. It is a composite wooden coating that is mostly preferred as a floor covering outdoors. It is a human and environment friendly floor covering that can be used in every place. It is very useful and long lasting. Thanks to the grid laid under the deck material, it allows water to drain quickly and effectively. Galvanized stainless apparatus should be used for mounting the deck material to the grill.
